Buck-le up! (Web App)

It's a web app that basically emphasises on reducing the carbon footprint of an individual.

It will ask for the places you want to travel to and show the best and cleanest mode of travel to help reduce the carbon emission and save a few bucks on travel along with it!

Basic structure and features:

1) Select 2 places between which you want to travel

2) Cost of petrol if traveling via car or cost for cab

3) Cost on metro

4) Cost on bus

5) Carbon emissions when using car, bus or metro

6) Final result: Amount of money Saved and how much carbon footprint you can reduce by choosing better travel options. (PS- Due to shortage of time, not all of the idea could be descripted in this file), Also reward points get added to your account, which is a fun way to promote and make the app interesting. Points rewarded on the basis of carbon footprint reduced.
